Eyeopener is an Online magazine made by students to provide and share knowledge and information to others. The target audience is mainly students, parents and new comers to Canada. However, others can always read and benefit from this social and cultural media.

Information shared through this media is mainly focused on Education, High school students, University and college news, and other related articles such as Science, Art, and Entertainment.

This magazine is supervised by Mr. Azad who is working on Eyeopener for more tahn 4 years. This issue, is the 26th issue of Eyeopener.

Enjoy it.

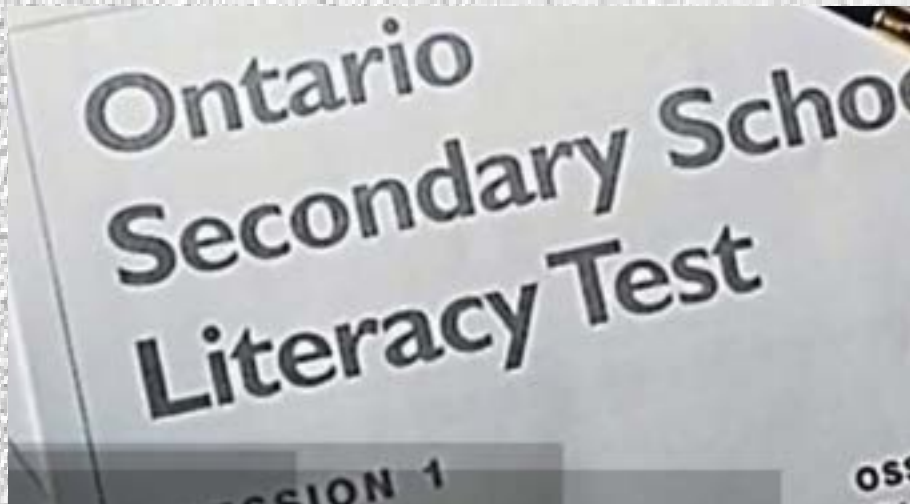

Azad

OSSLT

The Ontario Secondary School Literacy Test (OSSLT) measures whether students are meeting the minimum standard for literacy across all subjects up to the end of Grade 9. Successful completion of the literacy test is one of the requirements to earn an Ontario Secondary School Diploma. All students across the province write this test on the same date, usually in late March each year.

- 1- Students who fail the exam, could take the OSSLC course instead of their second attempt.
- 2- Students who were out side of school for more than 1 year can take the course instead of OSSLT test.
- 3- Students with special condition according to the principal can also take the course of OSSLC instead of attempting OSSLT test.

Biotechnology is a technology that involves the use of living organisms. Biotechnology is mainly used in agriculture, food science, and medicine. In biotechnology, living organisms are used to make useful chemicals and products or to perform an industrial task. An example of biotechnology is the use of the fermentation reaction in yeast to make beer and other alcoholic drinks. Another example is the use of carbon dioxide produced by yeast to make bread rise. Biotechnology has applications in four major industrial areas, including health care (medical), crop production and agriculture, non-food (industrial) uses of crops and other products (e.g. biodegradable plastics, vegetable oil, biofuels), and environmental uses. Another example is using naturally present bacteria by the mining industry in bioleaching. Biotechnology is also used to recycle, treat waste, clean up sites contaminated by industrial activities (bioremediation), and also to produce biological weapons. Today, there are several hundred biotechnology health care products and vaccines available to people and many are for previously untreatable diseases. Millions of farmers around the world use agricultural biotechnology to increase output, control and prevent insect and pest damage to crops and reduce farming's negative effect on the environment. There are also more than fifty biorefineries being built throughout North America to test and refine technologies and produce biofuels and chemicals from renewable biomass, which in turn reduces greenhouse gas emissions. There are many advances in the world of biotechnology which will help prepare and meet the need for society's future challenges. However, there is also the potential for biological warfare using some of the same biotechnologies.

the 6 Most-In-Demand Biotech Jobs Right now are: 1. Genetic Counselors 2. Biomedical Engineer 3. Laboratory Technologists/Technicians 4. Biophysicists/Biochemists 5. Epidemiologists 6. Microbiologists

later on you will read the details of these jobs and GMO on the next episodes of this newspaper.

Black klansman is American released in 2018 ,directed Spike Lee, casted by John David Washington, Adam Driver, Laura Harrier. BlacKkKlansman is the story of a African-American police in Colorado Springs (which used to be a racist state during the war between north and south) who has recently joined the police force unlike common stereotypes which existed during 1970's so that society wouldn't accept an African-American as their police force.

Ron Stallworth (John David Washington) is an undercover police who is trying to infiltrate into both an non-governmental extremist organization called Ku Klux Klan and African-American anti-oppression community with his partner Flip Zimmerman (Adam Driver) in order to stop the massive violence among these two groups. Stallworth manages to neutralize both groups and he bravely sets out on this dangerous mission.

The movie has earned ratings of 95% in Rotten Tomatoes and 7.5 in IMDb. BlacKkKlansman is one of the strongest movies of 2018. The movie is full of suspense and thrill that helps the plot flowing and not to be overwhelming. The cinematography shots are appropriate the most scenes they're well-directed. One of the major elements that actually has thrived the movie is acting. Every single character regardless of their importance in the story acted as the best way as they possibly could; John David Washington has managed to improve his acting skills and make name for himself as his performance is ranked in top ten performances by an actor in 2018. Also Adam Driver's performance is crucial to the development of characters in the movie as if we watch the movie somewhere in the middle,we don't really realize that whether he is an undercover police or a Klansman.

My movie recommendations:

Fences by Denzel Washington(2016)

If Beale Street could talk by Barry Jenkins (2018)

12 years slave by Steve McQueen (2013)

Chinese new year

This year Chinese New Year was on February 5, 2019. Chinese New Year is a vibrant and festive occasion for many people in Canada. This event can last for many days and often includes various festivities such as street parades and festivals featuring dancing, traditional Chinese costumes, firework displays, food stalls, and arts and crafts. Many Chinese Canadian families spend time together giving gifts, particularly red envelopes with money that are normally given to children. Some Canadian organizations have also participated in Chinese New Year through various activities over the years. For example, Canada Post issued special stamps to welcome the Chinese New Year in previous times. The Royal Canadian Mint also marked Chinese New Year with a new series of coins in the past.

Traditions and symbols

Chinese New Year has different symbols and traditions. For example, flowers are an important part of New Year decorations. Writings that refer to good luck are often seen in homes and business environments. They are usually written by brush on a diamond-shaped piece of red paper. Tangerines and oranges are also displayed in many homes and stores as a sign of luck and wealth. Envelopes with money often come in the color red, which symbolizes happiness, good luck, success, and good fortune. These envelopes are mostly given as presents to children. Each Chinese New Year is associated with an animal name.

Pathways to English

The chart below shows how most English language learners may progress through their ESL and/or ELD courses and into mainstream English courses. Not all students will follow this sequence exactly, and individual students may vary in the rate at which they progress through the levels.
